

1) Open project:

2) Place markers in the corners of the monument stand:

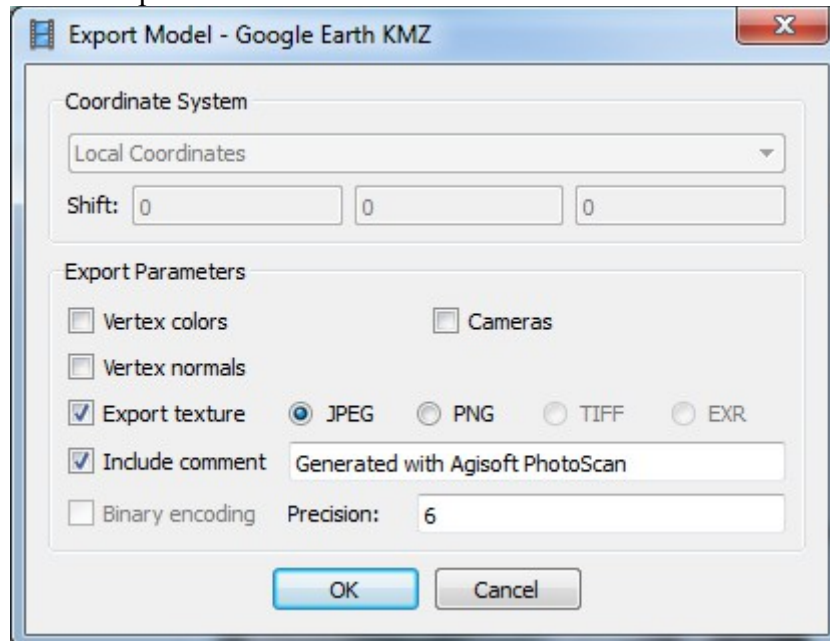

3) Get coordinates of the points from Google Earth and input them as Source values in the Reference (Ground Control) pane and do not forget to specify valid coordinate system:

Markers	Longitude	Latitude	Altitude	Error (m)
<input checked="" type="checkbox"/> point 1	30.297277	59.943412	12.000000	0.491472
<input checked="" type="checkbox"/> point 2	30.297206	59.943389	12.000000	0.349606
<input checked="" type="checkbox"/> point 3	30.297305	59.943385	12.000000	0.348342
Total Error				0.402124

Press Update Button in the Reference pane.

4) Choose File Menu → Export Model → KMZ format:

5) Open KMZ file in Google Earth:
